ESET NOD32 Antivirus 4
Business Edition

Endpoint antivirus protection

Combining powerful management tools, ease of use for end users, impressive performance and state-of-the-art proactive threat detection, ESET NOD32® Antivirus is the most effective way to protect your business' valuable data assets while ensuring regulatory compliance.

Management console — Antivirus — Antispyware

ESET NOD32 Antivirus 4 Business Edition

FACT: **The threats you aren't aware of pose the greatest risk**

FACT: **Criminals know this, and are flooding the Internet with over 200,000 new attacks a day. Some attacks target only a few users, making them very hard to identify using traditional antivirus technologies**

FACT: **Over 100 million users worldwide trust ESET's advanced heuristics technology—ThreatSense®—to proactively defend themselves from both stealthy and high-volume attacks**

ESET NOD32 Antivirus is the most effective protection against today's huge volumes of Internet and email threats. It provides award-winning proactive antivirus and antispyware protection without affecting your computer's performance, while offering business-grade management control. Integrated SysInspector® makes it easy for IT administrators to diagnose and resolve problems.

Using advanced ThreatSense technology, ESET NOD32 Antivirus proactively protects you from new attacks even during the critical first hours of a malware outbreak when other vendors' products aren't aware the attack even exists. ESET NOD32 Antivirus detects and disables both known and emerging viruses, trojans, worms, adware, spyware, rootkits and other Internet threats.

ESET NOD32 Antivirus is also one of the fastest antivirus solutions, so fast your users won't even notice it running. In fact, if you're replacing an existing antivirus product, your users will likely notice their applications are running faster.

For your IT and security teams, it's easy to build group policies and manage updates. For end users, it's incredibly easy to use and highly effective, so you'll see fewer help desk calls for virus outbreaks, or simple user questions.

ESET NOD32 Antivirus is security you can trust to meet your business security goals, every hour of every day.

KEY BENEFITS

Protection from the unknown

Award-winning ThreatSense technology uses multiple layers of threat detection to deliver the most effective protection possible against new attacks. It generates far fewer annoying false positive alarms than other products.

Finds malware other AV companies missed

Typically, when a new copy of ESET NOD32 replaces another antivirus product on a computer, the average user finds viruses or malware resident on the machine that were undetected by his or her previous antivirus product.

Built for speed

ESET NOD32 Antivirus is lightning fast, so fast your users usually won't even notice it's there whether they use physical or virtual endpoints. Even disk-intensive operations like performing a "full disk scan" run smoothly in the background while your users work.

Supports complex compliance requirements

ESET NOD32 Antivirus adds critical features, such as external drive access control and scanning, Cisco Network Admission Control (NAC) compatibility, as well as enhanced logging and reporting functions, to support your compliance initiatives.

Easy on user systems

ESET NOD32 Antivirus is "lean and mean," typically using just 60 MB of memory, a fraction of what other products consume. Because it's fast and light, upgrading your existing Internet security to ESET NOD32 Antivirus can literally be like buying a faster computer. It's a great way to realize extra life from your existing PCs and maximize your virtual environment resources.

Easy on end users

ESET NOD32 Antivirus was already highly regarded for its ease of use. Now it's even easier to use, which will brighten your help desk manager's day. From its compact and intuitive user interface to its minimal use of alerts, your users will receive the best possible proactive detection against malware, without enduring excessive system slowdowns and alerts, reboots or annoying false positives.

Easy to manage

ESET Remote Administrator saves time and accelerates user support by providing a single management console to control an entire network from a single screen — supporting tens or thousands of heterogeneous computers or virtual desktops. Installation, updates, alerts and other tasks are all easily managed from these intuitive screens. Integrated SysInspector makes it easier for IT administrators to diagnose and resolve problems.

ADDITIONAL FEATURES

Enhanced Remote Administrator

Detecting unregistered clients and synchronizing with Active Directory are now easier than ever. The parametric group feature dynamically updates with endpoints that match specific criteria to speed troubleshooting and reporting. Multi-platform management means one console is all you need to manage ESET solutions for Windows, Mac, Linux and mobile OSes.

Smarter scanner

Threats don't always enter your network in ways you expect. ESET NOD32 Antivirus inspects SSL-encrypted communication channels like HTTPS and POP3S and intelligently scans compressed files to find hidden threats other products miss. Proactive protection begins at the earliest point in system startup to ensure your network is always secure.

Clean and safe email

Email scanning for Microsoft Outlook, Outlook Express, Mozilla Thunderbird, Windows Live Mail, Windows Mail and other POP3/IMAP mail clients ensures your email is free of malware.

Removable media security

Threats can enter PCs from removable media such as USB thumb drives. For self-running media, ESET NOD32 Antivirus scans AUTORUN.INF and associated files on mount and scans any file on any removable before they can do harm. Power users can also configure ESET NOD32 Antivirus to block removable media access completely.

System tools

Compared to other security suites, ESET SysInspector takes the most detailed "deep-dive" snapshot of a system's processes. It simplifies diagnosing infected systems by assigning color-coded risk levels to all potentially threatening objects. It can be used by your security and IT pros to help identify how a system was breached, or discover what's been changed on a system. The SysRescue feature creates bootable rescue CD/DVD or USB drives to help you repair an infected computer.

Virtual environments

vmware READY   CITRIX ready

Self-defense and HIPS

ESET NOD32 Antivirus has built-in technology to prevent malicious software from corrupting or disabling it, so you can rest assured your system is always protected. Host-based Intrusion Prevention System (HIPS) protects your system from malware or any unwanted activity attempting to negatively affect the security of your computer. It couples advanced behavioral analysis with the detection capabilities of a network filter to monitor running processes, files and registry keys, and actively block inappropriate attempts to modify the OS or applications.

Usability improvements

For administrators, version 4 offers:

- Policy Manager makes it easy to import/export, apply, inherit and merge policies in a variety of ways

- License Manager with simplified tools to manage multiple licenses with different terms

- Read-only access for management console, which enables multiple administrators to share tasks without risk of overwriting configurations

- Notification Manager to keep administrators informed of all key events with customizable alerts

- Full support of Cisco Network Admission Control (NAC) compliance initiatives

- Advanced Protection status screen that informs you of threat detections

- Password protection that prevents ESET NOD32 Antivirus from being uninstalled by unauthorized employees or visitors

System requirements

Processors supported	Intel or AMD x86 / x64
Operating systems	Microsoft Windows NT 4 SP6 *
	Microsoft Windows 2000 SP4
	Microsoft Windows XP SP3 (32- and 64-bit editions)
	Microsoft Windows Vista SP2 (32- and 64-bit editions)
	Microsoft Windows 7 (32- and 64-bit editions)
	Microsoft Windows Server 2000 (32- and 64-bit editions)
	Microsoft Windows Server 2003 (32- and 64-bit editions)
	Microsoft Windows Server 2008 (32- and 64-bit editions)
Memory	80 MB
Disk space (download)	37 MB
Disk space (installation)	250 MB

* NOTE: Available with version 4.2 or later. Features not supported in NT are self-defense, removable media access control, SysInspector, SysRescue and enhanced portable PC support.
